WEEK 1: RELECTION

Through this activity, I became familiar with platforms such as Visual Studio Code, Sublime Text, and GitHub. I learned how to create files and folders in Visual Studio Code and how to build the structure of an HTML document inside index.html. The main challenge I faced was in the design aspect — making the website visually appealing to users. It required me to visualize the final output and research how to implement different design elements. By carefully organizing elements within the HTML document, I was able to enhance both the code and the appearance of the website.
