WEEK 3: REFLECTION

I learned how to link an HTML file to a CSS file to enhance the overall design of the website. I also gained an understanding of CSS and its components, including styles for the body, header and navigation, main content, forms, footer, and responsive design. The challenge I faced was properly combining these elements to achieve a clean and organized layout. I overcame this by testing the code and previewing the website in the browser, continuously adjusting the CSS until I achieved the desired design. As a result, I was able to improve the website by making it more organized and visually appealing through proper styling, spacing, and responsiveness.
